

Tactics to boost your website sales, enquiries & engagement

with simple UX (user-experience) optimisations

Brad Houldsworth

Head of Product, at Remarkable
Commerce

Remarkable
COMMERCE

Who am I...

Working in 'digital' for the last decade

Lead the product strategy & marketing strategy at Remarkable Commerce

Help brands to increase sales/enquiries & engagement, through:

- Developing growth strategies
- Designing new technology functions
- Supporting the use of our platform

The image shows two mobile app login screens, labeled A and B, side-by-side. Design A is highlighted with a green border. Both screens have a title 'Log In', a text input for 'Phone or email', and a password input with a toggle icon. Design A features a large purple 'Log In' button and a smaller purple 'Sign Up' button below it. Design B features a purple 'Log In' button and a purple 'Sign Up' button stacked vertically. Below each design is a grey circle with its respective letter.

Which has the best engagement?

Use primary and secondary buttons, to push users towards your preferred route

Give styling prominence to the heading and use light font colour on dark backgrounds

Give styling prominence to the heading and use light font colour on dark backgrounds

Personalisation

Form
Optimisations

Design Tips

74% of customers feel frustrated
when website content isn't
personalised

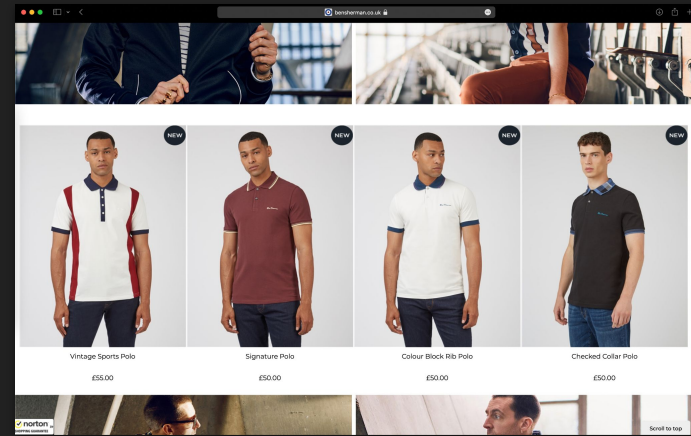

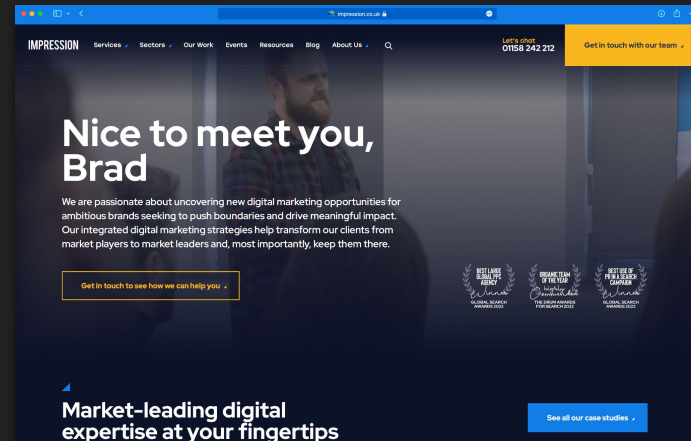

Marketers who are personalising
their web experiences see a
19% uplift in sales

Personalisation Tactics

Dynamic 'name' tag on site

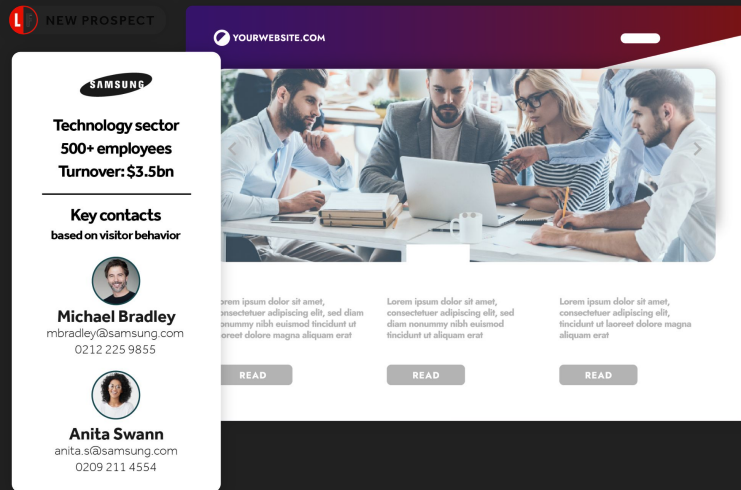

Product recommendation carousel

Dynamic content slots, based on previous engagement

Personalisation Suggestions

1. Know who your website visitors are...
Use a visitor tracking solution like LeadForensics or LeadFeeder.
2. Drive traffic to specific landing pages, targeting particular customer/lead types.
3. Add personal data dynamically, 'Welcome Back Natalie!' instead of 'Welcome'.

What data to collect

Here are the key types of data to collect for successful personalisation:

Demographic data – A collection of all the data points about a person, such as their name, email, title, interests and location.

Firmographic data – A collection of all the data points about a business, such as company name, industry, number of employees, annual revenue, and stage in the sales cycle.

Behavioral data – Reveals everything about a visitor's actions while using your website or app, such as pages visited, links clicked, average time on site, and number of visits.

Contextual data – Related to a visitor's unique properties while providing context to their behavior on a website or an app, such as device type, browser type, location, and time of the day.

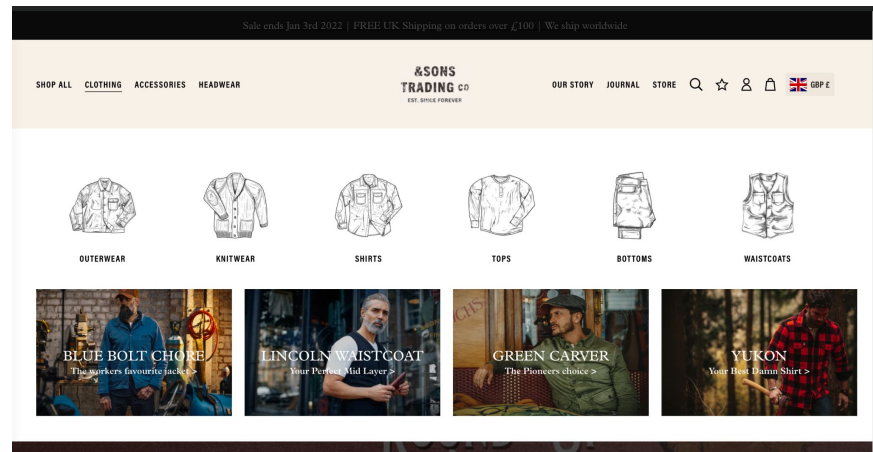

Form optimisation

Google's UX researchers found that aligning labels above fields on the left-hand side increased form completion time

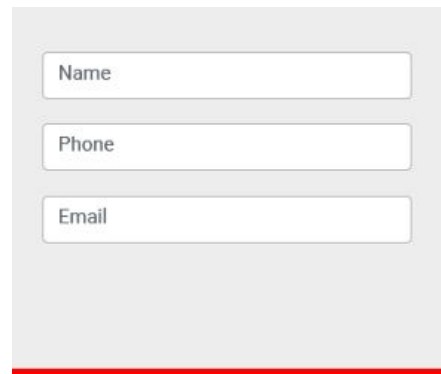

This is because it requires fewer 'visual fixations', as illustrated in the diagram.

Selectable images
are engaging.
Where it makes
sense, use clickable
images as a
question type

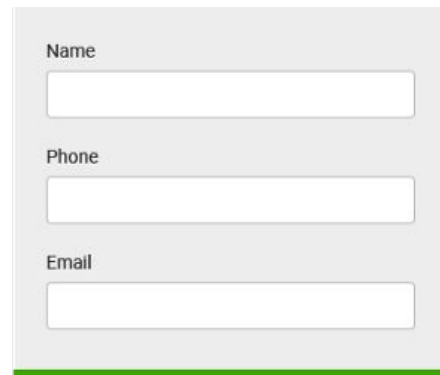

Give users a clear view on where to input

A form layout example labeled "Don't". It features three input fields stacked vertically. Each field has its label ("Name", "Phone", and "Email") placed inside the top-left corner of the input box. The entire form is enclosed in a light gray container with a red horizontal line at the bottom.

Don't

A form layout example labeled "Do". It features three input fields stacked vertically. Each field has its label ("Name", "Phone", and "Email") placed to the left of the input box, outside of it. The entire form is enclosed in a light gray container with a green horizontal line at the bottom.

Do

Use microcopy to
give confidence and
reassurance

Name

Phone

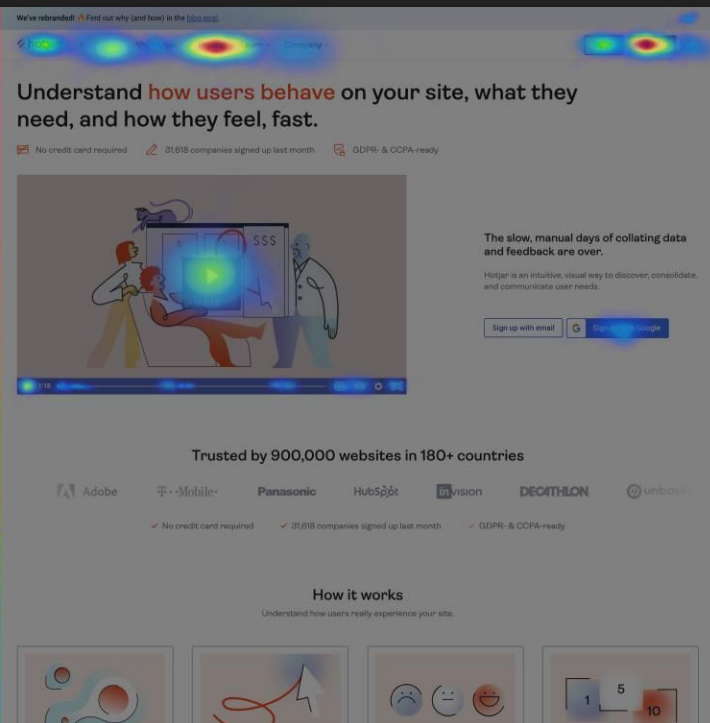

In case we need to call about the order

Email

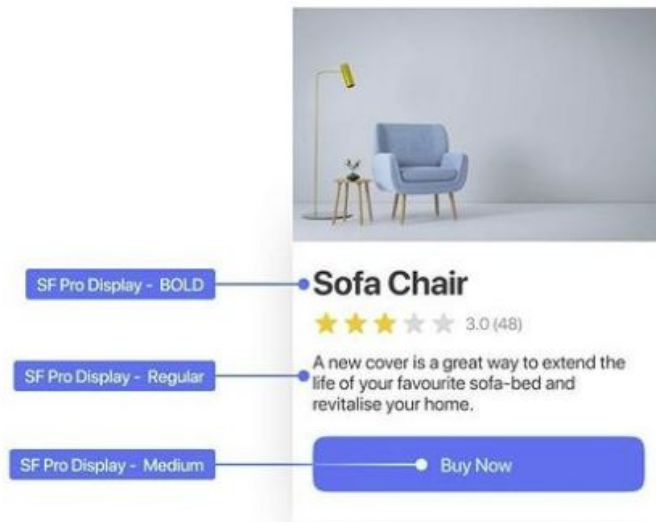

Do
